PROJECTS

CoPass, 1 of 3 developers | [GitHub](#)

November 2020

A B2B application which utilized deep learning through AWS Rekognition, alongside S3, Dynamo, Cognito, and Amplify to track possible COVID-19 cases across an ecosystem of the application's users

- Synthesized Mapbox, Foursquare API, and AWS DynamoDB for visual and interactive virus outbreak indicators
- Maximized Cognito to protect users' private vector of facial features data
- Architected the product's DynamoDB backend schema, S3, and GraphQL for an optimized flow of data

Fullsnack, 1 of 4 developers | [Link](#)

November 2020

Responsive mock E-commerce website built with React, Express, Node, Postgres, Google OAuth, and Stripe

- Integrated Stripe API to efficiently handle payments, coupons, and currency conversion
- Implemented CRUD operations for Admin users, using Node and Express
- Designed and created backend database schema for Users, Carts, and Orders using Postgres

DudeWheresMyKeys, 1 developer | [GitHub](#)

November 2020—Present

Augmented reality application that finds your lost items

- Leverages Swift and ARKit as a foundation for rendering anchored markers in augmented reality
- Utilizes Apple Core Location to accurately pinpoint your item's position when in close proximity
